

MP-100 SERIES CABINETS

Easy to Sanitize Poly Cabinet

The MP-100 Series Cabinets are specifically designed to be easily sanitized. Built completely from Polypropylene, the cabinets don't have any metal present in the design. The heavy-duty cabinets are specifically built for uses that would require full and frequent sanitization.

Standard models exist but the cabinets can also be custom made to each customer's unique specifications. The height, width, and depth can be modified to suit the requirements. The number of drawers and heights of the drawers are custom made as well. The unit can come as a stationary ground model, with non-locking wheels, or with locking wheels.

Drawers lock in closed and open positions
